Prometheus Data Model

Prometheus stores data as time series.

A time series consists of:

- Metric name
- Labels
- Timestamp
- Value

Example

`http_requests_total{method="GET",status="200"} 150`

Here:

- Metric name: `http_requests_total`
- method: `GET`
- status: `200`
- Value: `150`

Labels allow metrics to be filtered and grouped.
