Introduction to Prometheus

What is Prometheus?

Prometheus is an open-source monitoring and alerting system designed for collecting and storing time-series metrics. It periodically collects metrics from monitored systems and stores them with timestamps.

Main Purpose

- Monitor servers
- Monitor applications
- Collect system metrics
- Detect performance problems
- Query monitoring data
- Generate alerts
- Provide metrics to visualization tools such as Grafana

Important Features

- Time-series database
- PromQL query language
- Pull-based metric collection
- Service discovery
- Alerting support
- Exporter ecosystem
- Grafana integration

Basic Flow

Monitored System → Exporter → Prometheus → PromQL → Grafana
