Time-Series Data

Member 2 • Prometheus • DevOps Monitoring Phase

Time-Series Data

A time series represents measurements recorded over time.

Example:

10:00 → CPU 35%

10:01 → CPU 42%

10:02 → CPU 51%

10:03 → CPU 47%

Prometheus stores these measurements with timestamps.

Advantages

- Analyze historical performance
- Identify trends
- Detect abnormal behavior
- Compare system performance
- Create monitoring dashboards
