

COMMIT 28

Common Prometheus Errors

Member 2 • Prometheus • DevOps Monitoring Phase

Common Prometheus Problems

1. Configuration Error

Cause: invalid YAML or incorrect configuration.

Solution: validate configuration and check indentation.

2. Target Down

Cause: Prometheus cannot reach the target.

Solution: check host, port and metrics endpoint.

3. Metric Not Found

Cause: incorrect metric name or exporter does not expose the metric.

Solution: inspect available metrics.

4. Incorrect PromQL

Cause: invalid query syntax.

Solution: test the query in Prometheus.

5. High Cardinality

Cause: too many unique label combinations.

Solution: use carefully designed labels and avoid unnecessary high-cardinality dimensions.
