

COMMIT 22

PromQL Aggregation

Member 2 • Prometheus • DevOps Monitoring Phase

PromQL Aggregation

Aggregation combines multiple time series.

sum

`sum(rate(http_requests_total[5m]))`

avg

`avg(up)`

max

`max(node_memory_MemAvailable_bytes)`

by

`sum by (job) (rate(http_requests_total[5m]))`

Aggregation is useful for dashboards and service-level monitoring.
