PromQL Functions

PromQL provides functions for transforming and calculating metrics.

rate()

Calculates the per-second average increase of a counter.

```
rate(http_requests_total[5m])
```

increase()

Calculates the total increase in a counter over a time range.

```
increase(http_requests_total[1h])
```

avg_over_time()

Calculates the average value over a range.

```
avg_over_time(up[1h])
```
