

COMMIT 02

Prometheus Architecture

Member 2 • Prometheus • DevOps Monitoring Phase

Prometheus Architecture

Architecture

Prometheus periodically collects metrics from configured targets.

Main Flow

Application / Server → Exporter / Metrics Endpoint → Prometheus Server → Time-Series Storage → PromQL → Grafana

Components

1. Prometheus Server
2. Exporters
3. Service Discovery
4. PromQL
5. Alert Rules
6. Alertmanager
7. Grafana

Prometheus Server

The Prometheus server collects metrics and stores them as time-series data.

Exporters

Exporters convert system or application information into Prometheus-compatible metrics.
