

COMMIT 03

Prometheus Components

Member 2 • Prometheus • DevOps Monitoring Phase

Prometheus Components

1. Prometheus Server

Responsible for scraping and storing metrics.

2. Exporters

Expose metrics from systems that do not directly provide Prometheus metrics.

3. PromQL

Prometheus Query Language is used to retrieve and calculate metrics.

4. Alert Rules

Rules define conditions that should generate alerts.

5. Alertmanager

Handles alert grouping, routing, silencing and notification.

6. Service Discovery

Automatically finds monitoring targets.

7. Grafana

Grafana can use Prometheus as a data source for dashboards.
